DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 2004/0193865 to Nguyen et al.(hereinafter Nguyen) in view of US Patent 6581159 to Nevis et al.(hereinafter Nevis).

Regarding Claim 1, Nguyen discloses resetting said TCPA computing system see Par. 0026; executing a boot block code comprising a Core Root of Trust for Measurement (CRTM) see Par. 0017; reading bits in a register of a flash memory storing said boot block code, wherein said bits in said register indicate whether segments of said flash memory have been updated see Par. 0022; But does not explicitly disclose the hash values being used. However, Nevis discloses the obtaining one or more measurement values from a table storing hashed values from a previous measurement of a Power On Self Test (POST) Basic Input/Output System (BIOS) if one or more of said bits read in

said register indicate one or more of said segments of said flash memory storing said POST BIOS have not been updated see Col 5 Ln 15-25. It would be obvious to one having ordinary skill in the art at the time of the invention to include hash values in the invention of Nguyen in order to verify/unlock the hardware as taught in Nevis see Col 5 Ln 21-24.

Regarding Claim 2-3, Nguyen discloses the values being transmitted to TPM and setting control bits so no other device can read the register and further executing POST BIOS see Par. 0035-0036 & Par. 0038-0039.

Regarding Claim 4-5, Nguyen discloses the comparing of values and taking appropriate action if the values do not match see Fig. 3 item 316& 314 & Par. 0031.

Regarding Claim 6-7, Nguyen discloses the resetting of value and transmitting value to memory that the notify that it has been updated see Fig. 3 item 310 & 316 & 322.
